

Genetic Analysis/Forensic Scientist

Promega is looking for a research scientist with a background in genetic analysis and/or forensic DNA analysis. This position will be responsible for developing innovative products for forensic laboratories. The ideal candidate will have a background in genotyping, capillary electrophoresis, amplification, and STR technology. This is a bench level science position with responsibility for the design and implementation of project and technology development plans.

Our ideal candidate will have:

- A MS degree, preferably in genetics, molecular biology, or related scientific discipline with 6+ years post graduate experience
- Professional experience as a DNA Analyst in a forensic laboratory environment (preferably STR analysis)
- A proven track record of providing scientific leadership
- Experience formulating project strategies/plans and experimental design
- Ability to execute and champion innovative research
- Technical leadership experience and the ability to work well in a cross functional team environment

Promega Corporation is an internationally recognized leader in the biotechnology industry with a strong emphasis on work-life balance. At Promega you will find a campus like setting with a casual, highly productive, and professional atmosphere.
